DETAILED ACTION

1. Claims 1-8 and 10-21 are pending.

Claim Rejections - 35 USC § 102

- 2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 3. Claims 1-4, 6-8, 11-17 and 19-20 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent 7,111,179 to Girson et al.
- 4. As to claim 1, Girson discloses an article comprising a machine-accessible medium having stored thereon instructions that, when executed by a machine, cause the machine to: obtain from a performance monitor data on runtime performance of a thread, the data being indicative of a set of execution characteristic of the thread including an IPC metric [32, 42]; and based on the performance data, adjust an operating voltage or an operating frequency of the machine [col. 5, lines 16-33], wherein the operating voltage and operating frequency are nonzero [col. 6, lines 58-59].
- 5. As to claim 2, Girson discloses the performance monitor is a Performance Monitoring Unit (PMU) [28].

Application/Control Number:

10/736,728 Art Unit: 2116

- 6. As to claim 3, Girson discloses the PMU [28] is part of a central processing unit (CPU) [4] within the machine [FIG. 1].
- 7. As to claim 4, Girson discloses the PMU includes a plurality of counters for measuring different performance data [FIG. 4].
- 8. As to claim 6, Girson discloses that in response to the performance data, determining if the operating voltage and operating frequency should be adjusted upward or scaled down [col. 5, lines 16-33].
- 9. As to claim 7, Girson discloses comparing the performance data to determine a voltage value and a frequency value [48].
- 10. As to claim 8, Girson discloses obtaining a plurality of runtime performance data [col. 7, lines 62-67, and col. 8, lines 1-6]; and in response to the plurality of runtime performance data, adjusting the operating voltage and the operating frequency [col. 8, lines 48-66].
- 11. As to claim 11, Girson discloses operating the performance monitor in an operating system environment in communication with a platform hardware environment, and in communication with an end user code, in a user mode [col. 2, lines 37-41].

Application/Control Number:

10/736,728 Art Unit: 2116

- 12. As to claim 12, Girson discloses adjusting the operating voltage and the operating frequency [col. 5, lines 16-33].
- 13. As to claim 13, Girson discloses a method comprising: obtaining, from a performance monitor, runtime performance data indicative of a thread-level utilization for a central processing unit (CPU) having an operating voltage and an operating frequency [col. 2, lines 49-53]; in response to the runtime performance data, determining if either the operating voltage or the operating frequency is at a desired value [col. 7, lines 62-67, and col. 8, lines 1-6]; and in response to the determination, adjusting the operating voltage or the operating frequency [col. 5, lines 16-33].
- 14. As to claim 14, Girson discloses adjusting both the operating voltage and the operating frequency [col. 5, lines 16-33].
- 15. As to claim 15, Girson discloses adjusting the operating voltage and the operating frequency upward [col. 5, lines 16-33].
- 16. As to claim 16, Girson discloses adjusting the operating voltage and the operating frequency downward [col. 5, lines 16-33].
- 17. As to claim 17, Girson discloses the performance monitor [28] is a Performance Monitoring Unit (PMU) [28].

Art Unit: 2116

18. As to claims 19-20, Girson discloses comparing the performance data to determine a voltage value and a frequency value [48].

Claim Rejections - 35 USC § 103

- 19. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 20. Claims 5, 9-10, 18 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 7,111,179 to Girson et al., in view of U.S. Patent 6,233,690 to Choi, et al.
- 21. As to claim 5, Girson teaches the limitations of the claim, including monitoring performance data indicative of thread-level utilization, but does not teach that additional runtime performance data includes cache misses and other data dependency stalls.

Choi teaches that a computer can have its voltage or frequency adjusted due to the monitoring of performance data [col. 1, lines 11-45]. Thus, Choi teaches a performance-based voltage and frequency adjustment similar to that of Girson. Choi further teaches that the runtime performance data is selected from the group consisting of instruction cache misses, data cache misses, instructions executed, stalls due to data dependency, and data cache write-backs [col. 2, lines 62-67, and col. 3, lines 1-10]. Other stall conditions well known in the art comprise branches executed, branch mis-predicts, instruction translation look-up buffer TLB misses and data translation look-up buffer TLB misses.

At the time that the invention was made, it would have been obvious to a person of ordinary skill in the art to employ additional runtime performance data as taught by Choi. One of ordinary skill in the art would have been motivated to do so that power can be saved through the monitoring of processor performance data.

It would have been obvious to one of ordinary skill in the art to combine the teachings of the cited references because they are both directed to the problem of adjusting processor voltage or frequency due to the monitoring of performance data. Moreover, the additional runtime performance data means taught by Choi would improve the efficiency of Girson because it allowed for power-saving during long latency machine stalls [col. 2, lines 62-64].

- 22. As to claim 9, Choi discloses the performance data is an instructions-per-cycle metric [col. 1, lines 40-45].
- 23. As to claim 10, Choi discloses the performance data is a memory references-per-cycle metric [col. 3, lines 11-21].
- As to claim 18, Choi discloses the runtime performance data is selected from the group consisting of instruction cache misses, data cache misses, instructions executed, branches executed, branch mis-predicts, instruction translation look-up buffer misses, data translation look-up buffer misses, stalls due to data dependency, and data cache write-backs [col. 2, lines 62-67, and col. 3, lines 1-10].

Application/Control Number:

10/736,728 Art Unit: 2116

25. As to claim 21, Choi discloses adjusting the operating voltage or the operating frequency in response to an instructions-per-cycle metric or a memory-references-per-cycle metric [col. 1, lines 40-45, and col. 3, lines 11-21].

Response to Arguments

26. Applicant's arguments with respect to claims 1-8 and 10-21 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

27. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

10/736,728 Art Unit: 2116

28. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric Chang whose telephone number is (571) 272-3671. The examiner can normally be reached on M-F 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rehana Perveen can be reached on (571) 272-3676. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
